First impression count

We decide within a tenth of a second how we feel about people we meet. There is no second chance to make a first impression. The first look often falls into the face – and thus on the smile. Healthy, sparkling white teeth determine an open, confident smile.

Your dentist can offer you professional support for your confident, sparkling smile with the fläsh Tooth Whitening System. Tooth whitening with fläsh is a process that dissolves stains in the enamel by an oxygen reaction. The matched to the gel light spectrum of the fläsh Tooth Whitening System enhances this process and provides a safe and gentle treatment that reveals your most sparkling smile in just one visit.

The fläsh Tooth Whitening System is only available at your dentist. This ensures a safe and professional treatment.

Safe method

Aesthetic restorations such as fillings, inlays or crowns cannot be changed in color. Take your chance to enjoy your brightest smile before an aesthetic restoration with professional tooth whitening.

Tooth whitening before aesthetic restorations

Aesthetic restorations such as fillings, inlays or crowns cannot be changed in color. Take your chance to enjoy your brightest smile before an aesthetic restoration with professional tooth whitening.

Before and after the treatment

A professional tooth cleaning is recommended prior to professional tooth whitening. Avoid the consumption of coloring foodstuffs, beverages and tobacco for the recommended time right after the treatment.

Maintaining the treatment results

With normal care of your teeth by brushing, flossing and regular professional cleaning your teeth will always be brighter than before treatment. In addition your dental professional can offer you the right products to maintain your sparkling, confident smile: e.g. fläsh Take Home Whitening System, fläsh Whitening and the fläsh Whitening Tooth Paste.

Ask your dental professional today or visit flaesh.com/flaesh.com

Your dentist can also explain the optical effect of the treatment in case of medical indication.

fläsh Tooth Whitening App

Experience the cosmetic success of tooth whitening with the new virtual fläsh Tooth Whitening App.

- Visualization of tooth whitening, using new or existing photos from the library on your smartphone.
- Precise and simple detection of the teeth.
- Adjustable brightness simulation with automatic detection of light conditions on your pictures.
- Saving of photos.
- Before/after comparison.
- Share photos via email, Facebook or Twitter.

Get your fläsh App for Android and iPhone free of charge.
